

# Build a profitable system 🙌

Welcome to Upmarket Academy! Let's start.

Here are 3-Steps to Build a Profitable Trading System:

## 1. IF THE TREND IS BULLISH

In a bullish trend we should wait for a pullback before entering in a trade.

One way to enter in a pullback is to wait for a higher low when the price respects the uptrend line.

 **Example:**

A strong engulfing candle at a trendline support along with a demand area marks a new higher low creation.

As a result the market broke its last swing high after creating this higher low.

## 2. IF THE TREND IS BEARISH

In a bearish trend we should wait for a pullback before entering in a trade.

One way to enter in a pullback is to wait for a lower high when the price respects the downtrend line.

 **Example:**

A strong engulfing candle at a trend line resistance along with a supply area marks a new lower high creation.

As a result the market broke its last swing low after creating this lower high.

### 3. IF TREND IS SIDEWAYS

In a sideways market. We should wait for a range breakout/breakdown and then make our decision on re-test.

 **Example:**

After a sideways market range breakdown. A proper retest was marked by an inverted pinbar followed by an engulfing candle.

As a result the market broke its recent lows after the re-test.
